

# POP CAN END TABLE

## Required Materials

- ♻️ 36 clean un-dented aluminum soda/pop cans (you can use your favorite brand)

- ♻️ hot glue gun (make sure younger kids have an adult to use the glue gun)

- ♻️ Plexiglas (using whatever color you want to us)

- ♻️ utility knife (An adult should be the only one to use the utility knife)

## Step-By-Step Procedures

1. Using 12 cans at a time, using the hot glue gun, glue the cans into a square (having the front of the can facing forward). This should give you 3 squares.
2. Stack and glue the three layers of cans on top of each other.
3. Let dry completely.
4. Using the utility knife, cut the Plexiglas into a shape about 3-inches bigger than the table shape (this step should only be done by an adult).
5. Hot glue the piece of Plexiglas to the top of the stacked aluminum cans.
6. Let dry completely.
